

200 meters down

Have you people heard about the plankton?
Just tiny algae – and it's floating, right
What about the nekton like jellyfish?
They swim around and survive
Moving through the water column
While the benthos crawl by

Dive in you're heading for the open ocean
Try as you may - you cannot see the sunlight – oh oh
200 meters down
Searching for some warmth from a hydro hydrothermal situation
Where bubbles come from cracks in ocean floors – oh
See the crabs and the worms
Your bioluminescence
Gives ya light in deeper zones

On the rocky shores
Are pounding waves
Where salinity and the temperatures change
Mix in river water to get estuaries
Those mangrove trees
Protect us please
Better than marshes of salt
From the bay of the Chesapeake

Zones – go through the surface zone
Yea zones – through the transition zone
Now you're almost home

La la la la

We started intertidal and went neritic
Here is shallow shallow water - lots of plants in it
Most ocean life comes here to eat
On the coral reef
In the sunlight and warmth
Or the - Kelp forest
Cold water by the rocky floors
